

News from Baralan
03/09/09

Baralan group consists of several production plants devoted to the production of packaging for cosmetic.

In our metallization plant we have recently set up an innovative varnishing machinery dedicated to treatments on glass bottles and plastic closures.

This equipment uses water based varnishes and all the processes are fully environment friendly.

An infinite variety of customizations are possible now.

The quality we can reach is at the top of the cosmetic packaging industry offer.

To achieve very competitive prices we suggest to use this machine for quantities starting from 20.000 pcs.

Smaller quantities are always feasible using the others machines.

Please contact us for details.
